## 1. Mustelid monitoring results

Monitoring Date:	<b>April 2008</b>
Monitoring Location:	<b>Wrights Hill</b>

Mustelids Detected:	<b>Nil</b>
Hedgehogs Detected:	Nil

Overall rat tracking rate:	3.7 %	+/- 11.8 %	Se 3.7 %
----------------------------	-------	------------	----------

Overall mouse tracking rate:	55.6 %	+/- 93.5 %	Se 29.4 %
------------------------------	--------	------------	-----------

### 1.1 Comparison with previous monitor results

- The rat tracking index of 3.3% recorded in the January 2008 monitor.
- The mice tracking index of 66.7% recorded in the January 2008 monitor.

### 1.2 Notes

- Mustelid monitoring was based on the most recent Department of Conservation “rat tracking” protocol and modifications to the protocol were necessary to achieve the monitoring objectives.
- When mustelids are **not** detected, this does not mean zero abundance of mustelids, but that no mustelids were detected in the current survey (therefore they are likely to be low in abundance).

## 2. Supply of monitoring data – Terms and Conditions

The enclosed information is supplied, within the framework of Greater Wellington’s data quality system, from the best practice currently available. Greater Wellington has exercised all reasonable skill and care in controlling the contents of the information.

As we endeavour to continuously improve our service, we may amend the data on which this information is based, where necessary and without notice, at any time.

Under no circumstances will Greater Wellington or its employees or agents be liable in contract or otherwise to compensate you for any loss, injury or damage (including loss of profits or consequential loss) arising directly or indirectly from the supply by Greater Wellington or its agents of inadequate, inaccurate or incorrect monitoring information.

Any use of the material supplied, for example, by inclusion in a report or media release, should be accompanied by an acknowledgement of the source of the data.
