Save Our Hills - Stephen Pattinson						1

Inclusion of catchment hydrology to support management of development control required

Model Inputs not clear | Report errors (appendix numbers etc) | Low quality visual maps | FMP 'lifetime' unclear ?| Forest harvesting debris model impacts | probabilistic simulations (none run?)

The Pinehaven Stream FMP uses the same flood modelling and same consultants as the failed Mangaroa River plan | Claims differences between flood mapping and independently engaged engineer's results |

The Pinehaven Stream FMP uses the same flood modelling and same consultants as the failed Mangaroa River plan | Claims differences between flood mapping and independently engaged engineer's results |

Difference in accuracy levels between flood maps | proposed District Plan Change Rules are overly restrictive and ambiguous |

Concerned with accuracy of historic flooding data | blockage factors and bypass values | Concerns freeboard allowance is unnecessary

Plans completely omit the natural feeder stream running under and through the properties on Field Street running through my own. I am aware of it running under 18-28, but unsure where it starts. This is not acknowledged, shown, mapped, or risked on any of the plans and maps. I believe this should be formally acknowledged and mapped in the plan.

A submission including 364 proforma questionnaires completed by members of Save Our Hills. A resubmitted petition from the 2014 round of consultation calling for an independent audit of the Flood Modelling
