Personal details (please only publish name)

James Burgess

I support the changes proposed to reduce the climate impact of new housing. I would like to see as many changes as possible to enable this – from staff resources and training to enforcement and anything else that removes barriers to more compact, liveable developments with better transport choice and lower environmental impact.

I specifically support Method CC.3 and Policy CC.2 that introduce travel demand management plans, and I support thresholds for their use being as low as possible so that they are used wherever they can have an impact.

Regards  
James Burgess
